

ERRATA TO THE SUBSEQUENT ENVIRONMENTAL IMPACT REPORT FOR THE RECOLOGY HAY ROAD LANDFILL LAND USE PERMIT AMENDMENT NO. 2

MAY 7, 2020

The following clarifications have been made to the text of the Draft Subsequent Environmental Impact Report (Draft SEIR) for proposed amendments (Amendment No. 2) to the Recology Hay Road (RHR) Landfill Land Use Permit (LUP) project. These amendments, including corrections to typographical errors and text clarifications, were identified by County staff and the applicant since issuance of the Final SEIR. These changes do not alter the analysis, conclusions, or findings of the environmental analysis presented in the SEIR and do not constitute significant new information, pursuant to California Environmental Quality Act Guidelines Section 15088.5. The revisions to the SEIR appear in the order they appear in the Draft SEIR. Text additions are noted in underline and text deletions appear in strikeout.

Chapter 2, Executive Summary

On page 2-2 of the Draft SEIR, the first bullet in Section 2.2.3, “Project Overview“, is amended as follows:

- ▶ A 24-acre lateral expansion of the landfill disposal area within existing landfill property to include an adjacent, 16-acre triangular area (Triangle) and 8 acres of existing landfill property adjacent to existing waste disposal areas. Currently, the Triangle is largely undeveloped open space with a private gravel road, a manmade drainage channel (drainage ditch), an aboveground stormwater pipeline, and infrastructure for groundwater monitoring and landfill gas and leachate management. Under the proposed project, this entire area would be included within the permitted landfill disposal area. The Triangle would result in an increase of approximately 8.8 million cubic yards to the landfill’s disposal capacity with the landfill footprint extended to the south. Because the expansion area would provide additional disposal capacity, it would extend the landfill’s overall life by at least 5 years. Because the JPO compost facility is within the permitted disposal footprint and will, in a later phase of the landfill, be decommissioned to allow for disposal of waste in this area, the proposed capacity increase associated with the lateral expansion of the landfill would also extend the potential life of JPO by at least 4 years.

Chapter 3, Project Description

On page 3-15 of the Draft SEIR, the first two sentences of second paragraph in Section 3.7.1, “Lateral Expansion of Landfill Capacity,” has been amended as follows to provide greater clarification regarding the 24-acre expansion area:

As part of the project, RHR proposes lateral expansion of the landfill disposal area that would occur within an approximately 24-acre ~~triangular~~ area, including a 16-acre triangular area (Triangle) to the south of the existing JPO compost facility (as shown on Figure 3-2). The remaining acreage ~~Triangle~~ includes ~~an~~ approximately 8-acres of the existing landfill property setback area (located within 7 acres of the permitted landfill boundary and 1 acre of the permitted JPO boundary) and approximately 16 acres of new disposal area, for a total of ~~24~~ acres.

No other amendments or clarifications to the SEIR are necessary. As noted above, the changes identified as part of this errata do not constitute significant new information pursuant to CEQA Guidelines Section 15088.5. and do not necessitate recirculation of the SEIR.
